ABSTRACT The abstract should be written for people who may not read the entire paper, so it must stand on its own. Your abstract should provide a synopsis of the entire article; begin with the broad context of the study, followed by specific background for the study; describe the purpose, methods and procedures, core findings and results, and conclusions of the study; emphasize new or important aspects of the research; engage the broad readership of CHTA and be understandable to a diverse audience (avoid using jargon); be a single paragraph of less than 250 words; contain the full name of the organism studied; NOT contain citations or abbreviations.

INTRODUCTION

For the introduction, authors should be mindful of the broad readership of the journal. The introduction should set the stage for the importance of the work to a generalist reader and draw the reader in to the specific study. The scope and impact of the work should be clearly stated.

Authors are encouraged to:

- cite the supporting literature completely rather than select a subset of citations;
- provide important background citations, including relevant review papers (to help orient the non-specialist reader);
- to cite similar work in other chaos theory and applications.

FIRST LEVEL SECTION HEADER

Use this level to group two or more closely related headings in a long article.

Second level section header

Second level section text.

Third level section header: Third level section text. These headings may be numbered, but only when the numbers must be cited in the text.

Manuscript received: Saturday 17th September, 2022

Received in revised form:

Accepted:

¹Corresponding author: Please insert the affiliation correspondence address and email for the corresponding author.

IN-TEXT CITATIONS

Add citations using the `\citep{}` command, for example (Akgul and Pehlivan 2016) or for multiple citations, (C. Sprott 2000; Rössler 1976).

FIGURES AND TABLES

Figures and Tables should be labelled and referenced in the standard way using the `\label{}` and `\ref{}` commands.

Sample Figure

Figure 1 shows an example figure.

Sample Table

Table 1 shows an example table.

SAMPLE EQUATION

$$S_n = \frac{X_1 + X_2 + \dots + X_n}{n} = \frac{1}{n} \sum_i^n X_i \quad (1)$$

RESULTS AND DISCUSSION

The results and discussion should not be repetitive. The results section should give a factual presentation of the data and all tables and figures should be referenced; the discussion should not summarize the results but provide an interpretation of the results, and should clearly delineate between the findings of the particular study and the possible impact of those findings in a larger context.

CHAOS

Theory and Applications

in Applied Sciences and Engineering

Figure 1 Example figure

Table 1 Example table

Student	Grade	Rank	Notes
Alice	82%	1	Performed very well.
Bob	65%	3	Not up to his usual standard.
Charlie	73%	2	A good attempt.

Acknowledgments

This work was supported by X University Scientific Research Projects Unit under Grants 0000-00-00-001, 0000-00-00-002.

Conflicts of interest

The authors declare that there is no conflict of interest regarding the publication of this paper.
