

PNAS LaTeX template for preparing invited submissions on Overleaf

Author One^{a,c,1}, Author Two^{b,1,2}, and Author Three^a

This manuscript was compiled on August 26, 2021

1 **Authors drafting perspectives should provide an abstract of no more than 250 words in a single paragraph. Abstracts should explain to the**
2 **general reader the major contributions of the article. References in the abstract must be cited in full within the abstract itself and cited in the**
3 **text.**

Keyword 1 | Keyword 2 | Keyword 3 | ...

1 This PNAS journal template is provided to help you write your work
2 in the correct journal format. Instructions for use are provided
3 below.

4 Note: please start your introduction without including the word
5 "Introduction" as a section heading (except for math articles in
6 the Physical Sciences section); this heading is implied in the first
7 paragraphs.

8 Guide to using this template on Overleaf

9 Please note that whilst this template provides a preview of the
10 typeset manuscript for submission, to help in this preparation, it will
11 not necessarily be the final publication layout. For more detailed
12 information please see the [PNAS Information for Authors](#).

13 If you have a question while using this template on Overleaf,
14 please use the help menu ("?") on the top bar to search for [help](#)
15 [and tutorials](#). You can also [contact the Overleaf support team](#) at
16 any time with specific questions about your manuscript.

17 **Author Affiliations.** Include department, institution, and complete
18 address, with the ZIP/postal code, for each author. Use lower
19 case letters to match authors with institutions, as shown in the
20 example. Authors with an ORCID ID may supply this information
21 at submission.

22 **Submitting Manuscripts.** All authors must submit their articles at
23 [PNAScentral](#). If you are using Overleaf to write your article, you
24 can use the "Submit to PNAS" option in the top bar of the editor
25 window.

26 **Format.** This template is intended for authors writing invited com-
27 mentaries or perspectives. The format for these article types may
28 vary, but an abstract is required for perspectives. Please be sure
29 to include the title, author line and author affiliations, keywords, ac-
30 knowledgments, and references. Other sections or headings are
31 permitted as needed.

Manuscript Length. Commentary text and references should not
exceed 14,000 characters (including spaces). PNAS encourages
the use of a single color figure or table since they help summarize
the article for scientists outside the immediate field of the paper.

Perspectives may be up to 9 journal pages, inclusive of abstract,
figures, and references. They should not exceed 65,000 characters
(including spaces). The standard format for perspectives is relaxed,
so nonstandard headings are permitted.

References. References should be cited in numerical order as
they appear in text; this will be done automatically via bibtex, e.g.
(1) and (2, 3). In perspectives only, all references cited in the main
text should be included in the main manuscript file.

Data Archival. PNAS must be able to archive the data essential to
a published article. Where such archiving is not possible, deposi-
tion of data in public databases, such as GenBank, ArrayExpress,
Protein Data Bank, Unidata, and others outlined in the [Information](#)
[for Authors](#), is acceptable.

Language-Editing Services. Prior to submission, authors who
believe their manuscripts would benefit from professional editing
are encouraged to use a language-editing service (see list at
[www.pnas.org/page/authors/language-editing](#)). PNAS does not
take responsibility for or endorse these services, and their use has
no bearing on acceptance of a manuscript for publication.

Digital Figures. EPS, high-resolution PDF, and PowerPoint are
preferred formats for figures that will be used in the main
manuscript. Authors may submit PRC or U3D files for 3D im-
ages; these must be accompanied by 2D representations in TIFF,
EPS, or high-resolution PDF format. Color images must be in RGB
(red, green, blue) mode. Include the font files for any text.

Images must be provided at final size, preferably 1 column
width (8.7cm). Figures wider than 1 column should be sized to
11.4cm or 17.8cm wide. Numbers, letters, and symbols should be
no smaller than 6 points (2mm) and no larger than 12 points (6mm)
after reduction and must be consistent.

^aAffiliation One; ^bAffiliation Two; ^cAffiliation Three

Please provide details of author contributions here.

¹A.O.(Author One) contributed equally to this work with A.T. (Author Two) (remove if not applicable).

²To whom correspondence should be addressed. E-mail: [author.two@email.com](#)

Please declare any competing interests here.

Fig. 1. Placeholder image of a frog with a long example legend to show justification setting.

Table 1. Comparison of the fitted potential energy surfaces and ab initio benchmark electronic energy calculations

Species	CBS	CV	G3
1. Acetaldehyde	0.0	0.0	0.0
2. Vinyl alcohol	9.1	9.6	13.5
3. Hydroxyethylidene	50.8	51.2	54.0

nomenclature for the TSs refers to the numbered species in the table.

Figures and tables should be labelled and referenced in the standard way using the `\label{}` and `\ref{}` commands.

Figure 1 shows an example of how to insert a column-wide figure. To insert a figure wider than one column, please use the `\begin{figure*}... \end{figure*}` environment. Figures wider than one column should be sized to 11.4 cm or 17.8 cm wide.

Tables. Tables should be included in the main manuscript file and should not be uploaded separately.

Single column equations. Authors may use 1- or 2-column equations in their article, according to their preference.

To allow an equation to span both columns, use the `\begin{figure*}... \end{figure*}` environment mentioned above for figures.

Note that the use of the `widetext` environment for equations is not recommended, and should not be used.

Supporting Information Appendix (SI). Authors should submit SI as a single separate SI Appendix PDF file, combining all text, figures, tables, movie legends, and SI references. PNAS will publish SI uncomposed, as the authors have provided it. Additional details can be found here: [policy on SI](#). The PNAS Overleaf SI template can be found [here](#). Refer to the SI Appendix in the manuscript at an appropriate point in the text. Number supporting figures and tables starting with S1, S2, etc.

Authors who place detailed materials and methods in an SI Appendix must provide sufficient detail in the main text methods to

enable a reader to follow the logic of the procedures and results and also must reference the SI methods. If a paper is fundamentally a study of a new method or technique, then the methods must be described completely in the main text.

SI Datasets. Supply .xlsx, .csv, .txt, .rtf, or .pdf files. This file type will be published in raw format and will not be edited or composed.

SI Movies. Supply Audio Video Interleave (avi), Quicktime (mov), Windows Media (wmv), animated GIF (gif), or MPEG files. Movie Legends should be included in the SI Appendix file. All movies should be submitted at the desired reproduction size and length. Movies should be no more than 10 MB in size.

3D Figures. Supply a composable U3D or PRC file so that it may be edited and composed. Authors may submit a PDF file but please note it will be published in raw format and will not be edited or composed.

Acknowledgments

Please include your acknowledgments here, set in a single paragraph. Please do not include any acknowledgments in the Supporting Information, or anywhere else in the manuscript.
